Early season insect and disease protection... all in one seed treatment

Introducing CRUISER MAXX™ Beans – a new soybean and edible bean seed treatment that combines broad-spectrum disease protection with the power of Cruiser®, a new generation, seed-applied insecticide that protects against key early season insect pests.

Choose CRUISER MAXX Beans for better control of early season seed- and soil-borne disease and insect pests.
- Improved yield potential due to better plant stands, root systems, uniformity and plant vigour.
- Convenient, seed-applied insect and seed- and soil-borne disease protection.
- Protects against target pests with reduced risk to beneficial insects
- Safe on the seed.
- Inoculant-friendly.

Early season insect protection you can count on
With an insecticide built right in, CRUISER MAXX Beans protects seeds, young shoots and seedlings from early season insect attack so that your crops achieve faster starts and stronger stands.
CRUISER MAXX Beans protects against:

**Soybeans**
- Seedcorn maggot
- Bean leaf beetle
- Wireworm
- European chafer

**Edible Beans**
- Seedcorn maggot
- Potato leafhopper
- Wireworm

Protection against the toughest pests
CRUISER MAXX Beans moves systemically through the roots, shoot and young seedling to protect young crops from the inside out.

Source: Summary of trials conducted by Syngenta Crop Protection Canada Inc. and third party researchers, 2000-2004.
CRUISER MAXX Beans provided 27.6% higher yield over edible beans treated with fungicide only, without the need of a foliar insecticide. On the DCT® treated crop, a foliar spray was needed to achieve a 14.2% yield increase.

Proof in the field
The images below show soybean trials conducted in 2005 and show how CRUISER MAXX Beans protects plants from insect damage – in this case, bean leaf beetle. The treated crop on the left shows very little feeding damage and good canopy development. The untreated soybeans on the right shows much more extensive feeding damage to the crop.

Disease control for even stronger stands
CRUISER MAXX Beans contains the same powerful, broad-spectrum fungicide package as Apron Maxx RTA® for protection against:

Soybeans
Damping-off and seed rots caused by *Pythium* spp., *Rhizoctonia* spp. and *Fusarium* spp. Seed rot and seedling blight caused by *Phomopsis* spp.

Edible beans
Damping-off caused by *Pythium* spp., *Rhizoctonia* spp. and *Fusarium* spp.; anthracnose caused by *Colletotrichum* spp.

GIVE YOUR CROPS THE POWER TO PERFORM™, ASK TO HAVE YOUR SOYBEANS AND EDIBLE BEANS TREATED WITH CRUISER MAXX BEANS.
